

PEP – Searching for a single word (“subject”)

PEP doesn't have true subject searching - meaning that articles and books in PEP don't have subject terms assigned to them. Instead, you search through the full text of articles or books to find those containing your desired word (“subject”).

- On PEP homepage, choose Search tab
- In the box labeled Search for Words or Phrases in Context, type your word and hit the Search button
- You can modify your word search with drop-down menus or additional type-in fields, and choose how to sort your results

Example 1: Single word plus an additional type-in field

Search for publications by P. Blos that mention the word *adolescence*. This example combines your word search with the Author field.

The screenshot displays the PEP website's search interface. At the top, there is a navigation bar with links for Customer Service, Help, FAQ, Report a Data Error, and About. A search bar is located in the top right corner. The main header features the PEP logo and the text "Psychoanalytic Electronic Publishing - A Psychoanalytic Library at Your Fingertips". Below the header, there are tabs for PEP, Journals, Books, Videos, Author, and Search. The Search tab is active, showing a search form with the following fields: Author (filled with "blos p"), Title, Year (Anytime, Year, and Year), Source (All Sources), Language (All Languages), Type (All Types), Cited (At least times in the past 5 years), Viewed (At least times in the last week), and Sort (Author). Below the search form, there is a section for "Search for Words or Phrases in Context (Use Quotes for Phrases)" with the word "adolescence" entered. There are radio buttons for Article, Para (selected), Quote, Dream, Dialog, and Reference, and buttons for Or, And, and Not. A Clear and Search button are at the bottom of the search form. The search results section shows "Results 1 - 28 of 28 for your search on 'adolescence; blos p'". The first result is "Blos, P. (1957). Preoedipal Factors in the Etiology of Female Delinquency. Psychoanal. St. Child, 12:229-249. [...]". The second result is "Blos, P. (1958). Preadolescent Drive Organization. J. Amer. Psychoanal. Assn., 6:47-56. [...]". The text of the second result is partially visible, discussing adolescence and preadolescence.

Example 2: Single word plus drop-down menus, including results sorting

Search for the word *depression* in books or articles published since 2005. Sort the results, with the most relevant ones at the top of the list.

The screenshot shows the Psychoanalytic Electronic Publishing (PEP) website interface. The search results are sorted by Rank, showing two results for the search term "depression" since 2005.

Search Statistics by Field (Matching Documents)

This example applies two modifications to our word search, using drop-down menus:

- The Year option can limit your search to items published before, after, or between specific years.
- The Rank option, using an algorithm, roughly sorts results by their relevance to your search term. Articles using the word frequently will be at the top of your results list.

Example 3: Single word truncation plus drop-down menus

Search for the root word *depress* and its variations, including *depression*, *depressive*, *depressed*, etc., in journal articles published in English since 2005. Sort by rank.

Kraepelin (1921) used the term **depressive** temperament to refer to a basic predisposition ...

Here, several modifications have been added to Example 2:

- The search is limited to journals only, using the Source drop-down menu
- The Language drop-down has been set to English, eliminating articles in other languages
- Instead of *depression*, we've typed *depress**. The asterisk represents truncation, telling PEP to search for the root word *depress* plus any number of letters following it. Highlighted in the results list above, for example, is an article using the word *depressive*.

Truncation is an important tool to ensure your search doesn't miss relevant articles.
